

Managed Backup as a Service (BaaS)

Powerful, Flexible Backup for Every Need

Many businesses struggle with outdated, costly, or insufficient backup solutions, often relying on a single backup medium, limited copies and/or not backing up to an offsite location.

IT teams seek a reliable, scalable, and secure cloud-based solution that protects against media and device failure during restores.

They want comprehensive coverage, support, and peace of mind, without high costs—exactly what RapidScale's Managed BaaS delivers.

Three Cloud Backup Options

RapidScale's three backup approaches help ensure your backups are always available and that restores are easy and accurate.

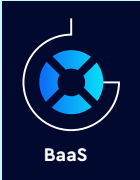

Our **Backup Repository** helps you get your onsite backup copied to the cloud and avoid costly, offsite tape rotation services with long RTOs. RapidScale's **Co-Managed Backup** service provides you with Veeam backup software and is a complete end-to-end solution that includes implementation, configuration, backup tests, backup job configuration assistance, and offsite cloud backup storage.

You can also backup physical servers and workstations directly to our Managed Cloud with

our **Physical to Cloud Backup** option. Lastly, our **Hosted Backup** offer covers all your RapidScale-hosted cloud infrastructure.

Targets for backups include VMs (VMware and Hyper-V), physical servers, physical workstations, files, and folders. All of these paths include our industry leading 24/7/365 RapidScale global support engineers.

RapidScale integrates Veeam's Service Provider Console (VSPC) with your backups, so we can better manage and support you. Additional options such as backup encryption and enhanced backup reporting are all available via VSPC. Best of all – there are no egress fees with RapidScale backups or restores.

Use Case #1 – Flexible, Affordable Offsite Storage

RapidScale's **Backup Repository** lets you copy onsite backups to our Cloud, ensuring offsite backups are always available for restoration. Ideal for customers with Veeam software who need only cloud storage, this solution uses Veeam Cloud Connect (VCC) to link your Veeam Backup and Replication Enterprise server to RapidScale's Cloud. Restores can be managed by your administrator or performed by RapidScale, always restoring to your network.

- Offsite cloud storage
- Veeam Cloud Connect
- Fast uploads and downloads
- No bandwidth or egress charges
- Assisted restores from cloud backup for VMs and physical machines

Use Case #2 – Complete Local and Cloud Backup

RapidScale's **Co-Managed Backup** is perfect for those without a backup solution or looking to replace their current one. It includes Veeam Backup and Replication Enterprise Plus software, backup agents for physical workstations and servers, and assistance with deployment, configuration, and local backup management. You provide onsite storage, while we use Veeam Cloud Connect for offsite cloud storage.

With RapidResponse Support and escalation to Veeam as needed, you're covered. **Physical Direct-to-Cloud Backup** is also available for physical servers and workstations

- All Veeam licensing
- Support for local backups
- Fully managed backups and restores
- Offsite backups to the RapidScale cloud
- Backup for physical and virtual devices
- Veeam Service Provider Console integration

Use Case #3 – Hosted Backup

If you host on RapidScale's Managed Cloud, we can easily add backup to your configuration to ensure that your applications and data are properly retained. We provide flexible storage configurations with custom backup data retention and backup schedules to meet your business, compliance, and application requirements.

- All Veeam licensing
- Fully managed backups and restores
- Custom backup configurations
- Flexible storage

Key BaaS Benefits

Flexible Backup Configuration

Tune storage consumption and meet compliance obligations via custom backup schedules, backup type, and backup retention.

Automated, Intelligent Backups

Set your backups to occur with regularity, based on optimal bandwidth, and perform continuous ongoing backups locally and to the cloud.

Back Up Nearly Any Machine

Backups support VMware and Hyper-V VMs, physical workstations and servers, individual files and folders.

Flexible Veeam Licensing Options

Use your own VBR licenses and just backup to our cloud with our VCC, or let us handle all of it and we provide you the Veeam licenses.

Compression and Encryption

Ensure your data is securely encrypted in transit and at rest, using several options for backup compression and deduplication to reduce your local and cloud storage consumption.

Let RapidScale's industry leading RapidResponse Support team set up and manage the optimal backup protection scheme for your key IT assets.
