

RapidScale's Intelligent Search

Operationalize your data for AI-driven search, insight, and action

Organizations are sitting on massive amounts of unstructured and semi-structured data, from PDFs and scans to public websites and third-party sources. But without the right infrastructure and tools, that data remains underutilized.

RapidScale's Intelligent Search, built on AWS and backed by our Generative AI expertise, ingests, augments, and organizes your information into a centralized, AI-ready system. This enables powerful search experiences, smarter decision-making, and scalable automation

Key features & benefits

1. CENTRALIZED AI-READY REPOSITORY

- › Ingests a wide range of sources, including PDFs, scanned documents, Word files, websites, and third-party hosted data.
- › Extendable to include structured data, images, and tables.
- › Creates a single source of truth for your organizational know-how

2. DATA AUGMENTATION

- › Rework your information into the most distilled and accessible formats.
- › Methods include summaries, knowledge graphs, tagging, and more.

3. INTELLIGENT SEARCH

- › Uses vector databases to enable retrieval of the most relevant information.
- › Connects with downstream applications for search, chat, and automation.
- › Empowers AI-driven workflows with high-quality, context-aware data.

4. SCALABLE & SECURE

- › Process and operationalize data at the Terabyte scale and beyond.
- › Ensures compliance and security with hyperscaler-guaranteed infrastructure and controlled access.

5. FUTURE-FACING
