

RapidScale Private Cloud

Master growth on a secure and scalable private cloud

RapidScale Private Cloud is the modern answer for businesses that need flexibility. Whether you're accelerating a VMware transition, modernizing legacy systems, or developing a hybrid cloud strategy, RapidScale's Private Cloud delivers enterprise-grade performance, security, and the freedom to evolve on your terms.

> Why RapidScale Private Cloud?

WE MANAGE MORE THAN HARDWARE

Your private cloud is more than just infrastructure. It's the backbone of your business operations. Our engineering team handles everything from migrating and monitoring to capacity planning and compliance, so you gain a cloud powered by our certified expert talent.

FLEXIBLE DEPLOYMENT OPTIONS

Our consultative approach ensures we identify the optimal private cloud environment for your business. Whether deployed through RapidScale's multi-tenant cloud, a dedicated cloud pod solely for your organization, or even within your on-premises footprint, we can tailor our approach to best meet your needs

ENTERPRISE-READY INFRASTRUCTURE

The RapidScale Private Cloud is built on best-of-breed technology: fully managed VMware Cloud Foundation (VCF) underpinned by Cisco UCS for performance, Pure and NetApp all-flash storage, enterprise-class security add-ons, and full-service business continuity solutions. Our platform is engineered for high performance, reliability, and security.

STRATEGIC GEOGRAPHIC REDUNDANCY

Through our Equinix partnership, we can establish presence anywhere your business needs to be. This global reach ensures low latency, high-speed access, and compliance-ready redundancy.

RESILIENT BY DESIGN

SSAE-18 SOC 2, HIPAA, and PCI-DSS certified Tier 3 facilities with Level 4 security, n+1 redundancy, and 100GB backbone connectivity powered by Tier 1 providers.

RAPIDSCALE MANAGEMENT & SUPPORT

24/7/365 global engineers with a 4.88/5.0 CSAT score.

> Accelerate transformation with confidence

Provision in Minutes, Not Months Spin up virtual resources quickly. No more waiting on hardware procurement or provisioning delays.

Predictable OpEx Model Shift from CapEx-heavy refresh cycles to a clean, predictable OpEx model that eliminates the headaches of owning and maintaining infrastructure.

Integrated Data Protection Optional disaster recovery and backup capabilities with secure, geo-redundant recovery targets, all integrated into our VMware-powered cloud.

Hybrid Cloud Ready Leverage our private cloud on-ramps to create a true hybrid cloud footprint for moving data between your private and public clouds quickly and cost effectively.

Co-Managed and Fully Managed Services Keep as much control as you want, or hand it all off to our team of experts so you can focus on what matters most to your business—your applications and data. We believe in true co-management: shared visibility, shared trust, and zero friction when offloading day-to-day infrastructure tasks.

Portal Power Our intuitive client Portal gives you deep visibility into assets, licensing, and spend, empowering smarter decisions and faster action.

> Differentiators that matter

Deployment Flexibility On-premises (your hardware or ours), hosted multi-tenant, or any hybrid in between. We can even pre-configure, ship, and install a new VMware environment in 72 hours.	Enterprise-Grade Gear We lead with performance, not bargain pricing. Cisco UCS powers our environment, while many providers rely on mid-market hardware.	Capacity Strategy We never run hot. At 70% utilization, we expand, so your workloads never fight for resources.
Connectivity Without Penalties No egress fees for public-to-private bandwidth or vice versa.	Migration Expertise We perform hundreds of migrations every year for both public and private cloud and can engage within hours of your scheduled cutover.	Contract Flexibility We make it easy to adapt your contract as your business needs evolve.
Global Reach, Local Speed Our partnership with Equinix gives us immediate access to a global footprint. Need capacity in a new market? We can land and expand in days.	No Data Center Agenda Unlike other providers, we don't own data centers. We are experts in cloud solutions and will design the right configuration for your business without being influenced by a real estate-driven quota.	Cost Optimization VCF is full of powerful features that are often underutilized. Our team will ensure you are maximizing ROI, while improving your resource allocation.

Best-in-class talent. Best-in-class architecture.
Best for your business.

*RapidScale Private Cloud isn't just infrastructure.
It's a growth engine designed for speed, resiliency,
and strategic foresight.*
