

# VeloCloud Secure SD-WAN Solution Brief

**Agile, Adaptable, Secure Networking**

## More Than WAN, Overcome Modern Tech Challenges

With RapidScale Managed VeloCloud Secure SD-WAN you can improve secure connectivity and endpoint management, transport and hardware independence, bandwidth efficiency, application performance, and simplify IT operations.

RapidScale's managed network focus and cloud-first approach ensures seamless connectivity to cloud services and data centers. This is particularly beneficial for businesses with cloud dependencies, as well as those with remote offices and workforces. VeloCloud SD-WAN is a Gartner leader in the SD-WAN space and RapidScale couples this strong technology with powerful layered security to address the convergence of modern networking and security concerns.

RapidScale goes the extra mile in providing implementation, rich management and support services, including making sure your SD-WAN solution is fully optimized, no matter the application or transport layer. RapidScale's approach enables our customers to prioritize strategic technology initiatives, like digital transformation, to enhance their competitiveness and agility in the market.

## Disparate Technology Begone!

Today's IT needs have evolved beyond mere WAN expansion to needing solutions to the challenges associated with the convergence of numerous IT and business considerations, that SD-WAN can more easily help overcome the complexity of:

- ✓ Difficulties with deploying and maintaining a geographically dispersed WAN locations, with various branch profiles.
- ✓ Providing flexible, scalable WAN and connectivity solutions, with ease of management.
- ✓ WAN technology evolution, while adequately addressing future growth and employing value-added services.
- ✓ Seamlessly integrating critical cloud services into the corporate WAN.
- ✓ Increasing utilization of cloud resources, while enforcing performance and security.
- ✓ Robust WAN security to keep pace with evolving threats.
- ✓ Fully secured SD-WAN that provides protection across distributed networks and endpoints.

## Why RapidScale Managed VeloCloud SD-WAN?

RapidScale, a managed service provider owned by Cox Business, offers a complete portfolio of SD-WAN products and resources to our customers. Factoring the variable IT needs of organizations large and small, combined with burgeoning network traffic concerns, RapidScale recognized the need to offer WAN optimization and traffic management, coupled with rich managed services layered on the VeloCloud SD-WAN platform with Fortinet firewall security protection.

# RapidScale Managed Secure SD-WAN Delivers

## Security Integration

Integrates easily with your security fabric for comprehensive protection

## Advanced WAN Optimization

Improves application performance

## Centralized Management

Central management and visibility for network control and monitoring

## Physical and Virtual Devices

Support for both physical and virtual network devices

## Scalable

Scalable, flexible architecture supporting multibranch networks

## AI-Powered Security

Optional advanced, enhanced threat protection with AI-powered security

## Automated Deployment

Automated deployment and provisioning reduces IT workload

## Competitive Pricing

Cost effective compared to other SD-WAN and cybersecurity solutions

RapidScale's Managed VeloCloud Secure SD-WAN solution provides businesses with a potent fix to their specific business challenges. Over 800 companies rely on RapidScale for easing their network burdens on more than 5,000 managed devices, delivering improved connectivity across their distributed networks for dispersed workforces.

## Co-Managed or Fully Managed

Every implementation is different, so we work with you to configure and customize your VeloCloud SD-WAN environment to maximize your investment. Once live, you can choose to either co-manage your environment or let RapidScale's experts continue to manage and monitor your experience. Either way, you're backed by our leading 24/7/365, RapidScale global support team of certified engineers, which garners 4.88/5.0 CSAT scores and 92 NPS ratings.

## Full Feature Set

- ✓ Complete BGP/OSPF support.
- ✓ Application-aware routing.
- ✓ Packet-loss remediation, with Forward Error Correction (FEC).
- ✓ Intelligent WAN link monitoring and failover.
- ✓ Robust bandwidth.
- ✓ **Portal integration** – See and manage a host of VeloCloud features in the RapidScale Portal, including connected devices, representations of network and hardware uptime and locations, billing and consumption, unused services, carrier(s) utilized, and much more.
- ✓ **Optional** – Fortinet Next Generation Firewall (NGFW) for maximum security, with available Unified Threat Management (UTM) advanced firewall features.
- ✓ **LAN-Side Consulting** – RapidScale consults beyond your WAN to ensure your LAN is optimized, including advanced WiFi configuration, DHCP options for hPBX/VoIP, VLAN/VxLAN segmentation, voice, video, transactional, and bulk Internet policy consultation.

## Advanced Circuit Monitoring Fully Supported

RapidScale can monitor Cox Business circuits within our footprint for issues. If it's out of footprint, RapidScale VeloCloud detects issues with transport providers through performance SLA-link monitoring.

We then escalate these issues on your behalf to your providers, ensuring your services are optimized and working well with your transport layer, minimizing connectivity downtime.

## Get SASE with Us

If you're exploring how SD-WAN can help your organization, take a look at how layering our managed Secure Service Edge (SSE) services on as a full Secure Access Service Edge (SASE) solution, to optimally protect your edge and WAN expansion and deploy a full Zero Trust Security approach.

**Want to More Simply Expand and Manage Your WAN Footprint?**

Reach out today to learn how RapidScale VeloCloud Secure SD-WAN can help you improve remote access and expand your WAN with ease.
